

## V2 Technology Helps Businesses Fight Cybercrime

### Cyber Advisory Council will support small and medium size businesses from cyberattacks

**Cleveland, OH – August, 2022** V2 Technology, a leading national information technology company, announces the establishment of a cyber advisory council to support small and mid-sized businesses (SMBs) with cybersecurity.

The **V2 MyCIO® - Cyber Advisory Council** will monitor trends and serve as a cybersecurity thought leader and community outreach provider for mid-market companies in Ohio. The council will collaborate on current issues and provide informative programs to support business owners and leaders in their efforts to protect their organizations. SMBs are vulnerable targets for cybercriminals because they lack the ability, resources, and preparedness to protect their technology.

Using a holistic approach, V2 has brought together key stakeholders from various industries in its fight against cybercrime. The Council includes representation from information technology, legal, banking, financial, insurance, and law enforcement industries. Specific members include: V2 Technology, Brennan Manna Diamond, Westfield Bank, Oswald Companies, and input from the FBI.

“We want to make cyber preparedness more approachable and accessible for small and mid-sized businesses,” said Brandon Pauley, Principal at Brennan Manna Diamond.

“Cybersecurity is at the forefront of business owner’s minds each and every day. The Council will help them to minimize vulnerabilities and increase preparedness,” said Patrick Golembiewski, CEO of V2 Technology.

Preparations are underway for a Q4 program with a focus on incident response to a cyberattack. For more information on V2 Technology’s Council, or learn more about its status as a CMMC provider organization (RPO), visit the website at [www.v2portal.com](http://www.v2portal.com).
